

## Children with Anxiety Disorders in Primary Care: the views of General Practitioners II

We invite you to take part in a National Institute of Health Research funded study which focuses on management of childhood anxiety disorders (children under 12 years) by General Practitioners in England. This study explores GPs' experiences of identification, management and referral of these disorders. Your responses will help inform practice guidelines for children with anxiety disorders.

**Taking part in this study will involve completing a survey, which should take 10 minutes to complete. This is available to you online or as a paper copy. This is open to as many GPs per surgery as desired.**

As a reimbursement for taking part in the study you (or a nominated member of your practice) will have the opportunity to take part in a Webinar about identification and management of childhood anxiety disorders. This module may be used to contribute towards Continued Professional Development points and a certificate of attendance outlining your involvement in important mental health research will be provided. You will also be entered into a prize draw to win one of two £100 amazon vouchers.

Further details of the study are available as an information sheet at the link below, along with a consent form, which can be signed online. **Please follow the link provided to access the online survey:**
